

SANY PLUS

Sanitizing environments of middle-big dimensions

SANY PLUS ozone generator is designed to sanitize and deodorize environments of middle and big dimensions up to 400 m³.

SANY PLUS is manageable, easy to be carried and it is powered with electric energy through a normal socket. It is provided with a simple and intuitive controls display. It is easy to be used because it is provided with an electrical box which manages all the sanitizing process in complete autonomy. Each one of the 3 programs is different for the duration and quantity of generated ozone, and it is planned to guarantee the best result in the shortest time possible, according to the type of environment to sanitize or the treatment to do. Moreover, the electrical box allows to cooperate in total safety, because it selects automatically the correct quantity of ozone to input in the place and it optimizes the exposition time in order to avoid damages to furnitures, objects and surfaces.

Unlike most of sanitizers on the market, **SANY PLUS** is provided with the “**Safe System**”, a device which catches the residual ozone at the end of the pre-selected program and converts it back to oxygen, allowing to get back to the normal activities inside the place in total safety, as required by the law D.Lgs. 81/2008 Unique Text in the subject of health and safety protection in the working places.

Technical data sheet

Front end with controls and displays intervals/functions
 Led signal for device in action
 Display for visualization of programs

TECHNICAL SPECIFICATIONS:

Structure:	ACCIAIO AISI 430
Power supply:	110/250V – 50/60 Hz
Weight:	kg 14
Max treated volume:	400 m ³

SANITIZING TREATMENTS:

ENVIRONMENTS UP TO 100 M ³	Duration: 35+2 Min.
ENVIRONMENTS UP TO 200 M ³	Duration: 45+2 Min.
ENVIRONMENTS UPTO 400 M ³	Duration: 85+2 Min.
